The smart hygrostat THP-HygroPro with mould-proof Control

Smart Control with Two Modes Selectable

Mode A: Mould-proof in auto control.

As you can see from the right diagram which indicates the relationship between a certain RH and the days before growth of mould at a certain temperature degree. The THP-HygroPro is designed to make the days before growth of mould up to be 32 days. With the smart auto control software, the hygrostat will control the relay output automatically to the dehumidifier to maintain comfortable air quality with the right humidity level.

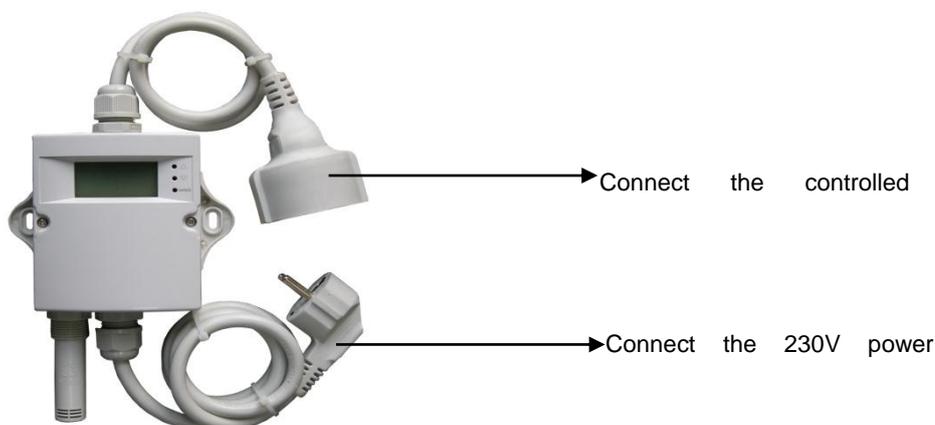

Mode B: Manual humidity level setting

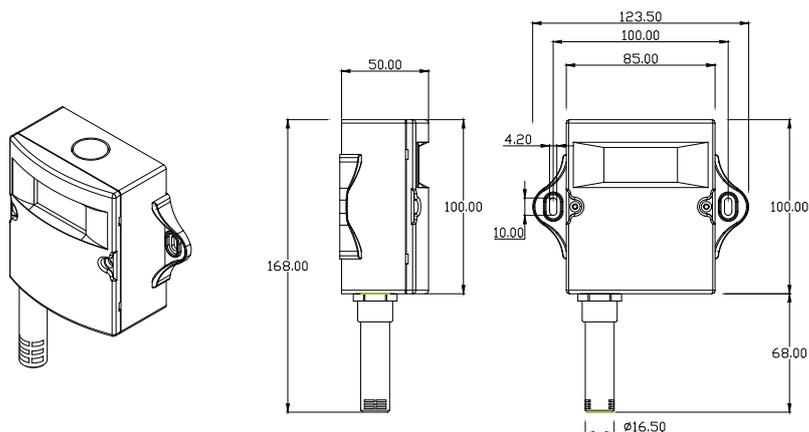

If you don't want to use above auto humidity control, you may preset the humidity level by yourself.
